Lerma-Blasco I hope you enjoy the presentation. And so far this entry on #SeR55 Presentation SeR Beta Training 2015 is all about SeR - OPEN DIALOGUE Waiting for you to be interested and give you something. Would we like to know if you liked this record? Thank you for following us and reading to us. Until the next article ... Thanks for sharing it. Page 2 Hello tod@s, We leave you a link to a record that we were allowed to write and publish for a blog digital field of learning called the ICT Key of the Open University of Catalonia - University of Obert Catalonia (UOC). In case you don't want to change blogs, we duplicate in this post the content of it: In secondary education and, in the spring, that's when publishers usually run their news for the next school year. In this case, McGraw-Hill, a major professional publishing house, edited an update to Network Services, which he published in 2010. The authors of this book are Elvira Mifsud Talan and Rael W. Lerma-Blasco. Network Services covers the entire updated module curriculum of the same name as the middle class of the microinformatics cycle and networks belonging to the professional family of computer science and communications. Its structure, content, sequencing and objectives follow the guidelines set out in the specifications of the module. It consists of nine training units that study basic network services (server and client) of TCP/IP architecture, such as connecting private networks to public networks, name resolution, network configuration, remote control and access, web service, file transfer, email, Wi-Fi and VoIP networks. All of them with a practical approach. The book has an exceptionally practical approach and follows the philosophy of learning in practice. It has many activities, a training test, and case studies with his detailed solution step by step. One of the book's most important goals is to assist the student in the installation, maintenance and operation of network services, both in Intranet and on the Internet, and thus to facilitate their inclusion in the world of work. The teacher who uses it will have in their hands a guide-decider that will contribute to the development of the curriculum module Network Services in the classroom. Another important value of the book is the use (where possible) of free software to implement various network services. The student will be able to do most of the practical work with programs that can be found online or which are likely to already be included in their GNU/Linux distribution. In addition, students have access to an Online Learning Center (CEO) where they will find practical information that they can use to strengthen and even enhance knowledge and self-assessment, as well as all the learning resources needed to develop the Network Services module. For more information, see the links below. View the web of the current edition of the Web View of the first edition of Elvira Mifsud Talan is a secondary education teacher specializing in computer science and communications. Works at IES Abastos de Valencia. She was head of computer services at the Centers Conselleria d'Educaci guide of innovative distribution projects LliureX, educational portal Mestre a Casa and the introduction of smart centers among others.
