Leadership in Energy and Environmental Design (LEED) is a third party to the Green Building Inspection System developed by the U.S. Environmental Construction Council (USGBC). Over the centuries, the operation of buildings and the construction of new buildings have had a negative impact on the environment. As more and more people are aware of this aspect of construction and how the threat of climate change has begun to look very real, builders and building owners alike are now turning to LEED to help them modernize and design more environmentally conscious buildings and communities. Today, the demand for LEED certified buildings has increased dramatically. The cumulative impact of the growth of environmental legislation and the requirement of tenants and shareholders to reduce their environmental impact require property managers to both understand and assume responsibility for the environmental performance of their facility. What is LEED accreditation? LEED certification for buildings - professionals interested in green LEED buildings usually study LEED standards in preparation for an accreditation exam, and after passing the exam they become LEED accredited. Thus, basically, LEED accreditation is the process of passing LEED exams and earning LEED Green Associate credentials or LEED accredited professional (AP) credentials, depending on which exam you choose to take. There are three different levels in the LEED professional credentials program: LEED Green AssociateThe LEED Green Associate credentials for people who have documented, up-to-date insights into the most modern green building principles and practices. This is basically a basic credential, and for many it's the first step before earning advanced credentials such as LEED AP with a specialty. Read more: How to pass the LEED Green Associate ExamLEED AP with a specialty LEED Accredited Professional (AP) credentials means an expanded depth of knowledge about green construction practices and therefore an even greater commitment to sustainable construction. To obtain LEED AP credentials, you need to specialize in a specific area. Please note that the first step to becoming a LEED AP is to earn LEED Green Associate credentials. Once you have passed the LEED Green Associate Exam, you can choose to pursue one of the five LEED AP specialty credentials (more on that below). Applicants can also take the LEED Green Associate and LEED AP exam in one sitting or separately. LEED FellowLEED Fellows is an outstanding class of people who are nominated by their colleagues and have at least 10 or more years of professional experience in green construction. LEED fellows must also have reached LEED AP with specialty credentials. LEED AP BD-C CredentialAs mentioned above, obtaining LEED AP credentials requires specialization in Area. The specialization of the NAME resembles a postgraduate degree. To get a higher level of skill in a subject, one one Specialize. You can specialize in each of the different LEED rating systems listed below - LEED AP Building Design and Construction (BD-C) - This rating system includes guidelines for new buildings and older buildings undergoing major renovations. LEED AP Operations and Maintenance (OKM) - This category can be used by building owners and operators to measure operations and maintenance, as well as make minor improvements. LEED AP Interior Design and Construction (ID-C) - This rating system was designed specifically for tenants, renting part of a larger building. LEED AP Neighborhood Development (ND) - This category integrates the principles of smart growth, urbanism and green building into the first national program for neighborhood design. LEED AP Homes - It was specifically designed for single- and multi-family residential buildings that have three floors or less. Now let's talk about LEED AP Building Design and Construction (BDZC) credentials in detail. This certificate is suitable for professionals with experience in designing and building stages of green buildings serving the commercial, residential, educational and medical sectors. To earn it, you need to pass the LEED AP BD-C exam. And since this LEED exam has approximately 30% pass rate, completing any LEED AP exam is not an easy task. But with the right guidance, training materials and practical tests, you can surely pass the exam with excellent results. To pass the LEED AP BD-C exam, you must follow these steps of the application to register and schedule an exam: log in to your user account on the usgbc.org website, and then go to the accounts. If you don't have one, you'll be asked to create a free account usgbc.org site. Select leed AP BD-C exam.Complete exam registration process. The exam date schedule and place on the prometric.com/gbci.Please that this registration is valid for one year. This year you have three registrations in the exam section. After this year's expiration, you have to wait 90 days before you sign up again. You can also request a one-year registration extension for extenuating circumstances. Once you've done the exam fee payment, keep the code generated. Now go www.prometric.com and use this code to select the date, time and place for the exam. The exam is held six days a week (Monday to Saturday from 8 a.m. to 8 p.m.) at any Prometric Testing Center. If you live in the US, you are sure to find a center nearby as there are usually several in every major city. If you are in an area where there is no Prometric testing center, you can contact USGBC for alternative testing methods. LEED AP BD-C Exam CostIf you are a member of the USGBC, LEED AP BD-C test will cost you \$250. If not, you pay \$350 for the exam. For a combined exam (LEED Green Associate and LEED AP major), USGBC members must pay \$400 while others pay \$550 LEED AP BD-C Exam Preparation Materials So far there are many things available online when when comes to study materials for LEED AP BD-C, if you want the best of the lot that will help you pass the exam easily, learning material from GBRI can be a great option. GBRI or Green Building Research Institute is a proud partner in the education of USGBC, IWBI and AIA. This can help you earn LEED AP BD-C credentials in just 7 weeks with best-in-class materials, which is also the first try! GBRI knows that it can get a little confusing to decide what to learn and what not to learn while preparing for the LEED AP BD-C exam. Thus, the institute ensures that with its carefully selected LEED AP BD-C Exam Study Prep materials, you will never make a mistake. Their exam prep package costs \$249 and includes the following research materials: Purchase LEED AP BD-C Exam Prep package includes a LEED Green Associate package as well. 2 exam prep packages with a single purchase Study Guide: Best Comprehensive GuideOnline Training Modules: Access on Any Device 24x7 for 1 full yearModule Wise Practice Quiz: 700 Practice Test Questions with Explanations for Each IssueFlash Cards and Memory Cards: Research on Go For Your LEED Exam! MP3 Audio Files: Study at any time on your phone or music player choicePractice tests / Mock exams: 3 LEED AP Practical tests modeled as the actual LEED AP Exam No. 5 LEED Green Associate Practice Tests / Mock ExamsWhat more, the faculty of GBRI is so sure that you will pass the LEED exam, following their recommended roadmap that they are back with a 100% guarantee. How to pass leed AP BD-C Exam!Important tips for passing LEED AP BD-C ExamListed below 9 important tips to help you on how to pass the LEED AP BD-C Exam-First Board will download the free LEED AP BD-C Candidate Handbook from the USGBC website, which has current policies and procedures for LEED v4 AP with specialization of professional exams. It includes test specifications, exam recommendations and sample questions for the LEED AP BD-C exam. This will help you direct your research properly. Find the right training materials. Look for the different options available online. As we mentioned earlier, it can get quite confusing to understand what is important to study and what is not. LEED AP BD-C Exam Study Prep Materials from GBRI will be a great way to get a full understanding of all the necessary concepts. The most important advice if you want to pass this exam with flying colors would be to take loads of practical tests. Most practical tests simulate an actual exam very closely, so you get a fair idea of what to expect. It is important to remember all the abbreviations, numbers and credits that should be known about a week after the actual test. This will help you easily remember the numbers during the exam. All Get 10 minutes before the 2-hour exam starts to allow them to familiarize themselves with the computer and test the software. Once you've finished reading how the testing software works, use Time to do brain dumps - that is to write down as many things as you remember that you think will be useful in your exam. Read the exam paper carefully and then read it again. Also, check and double-check all your answers. Use the Mark button to flag questions you're not sure about. Since you get 2 hours to complete the exam, you can always go back to the marked questions after you're done with the rest. When you feel that there is more than one correct answer to a particular multiple choice question, go with a better answer. Skip the hard questions to the end. Fifteen of the 100 questions were not discussed; so if you come through very difficult, tag it and go back to it at the end. Spend more time on the ones you know and use what the remaining time you have at the end of the most challenging. So you won't lose confidence as you go through the exam. Also, there is a good chance that the issue won't even count against you. A very important piece of advice is to answer every question. If you are unsure of the question, you may miss it at first, but then go back and answer or guess at the end. Not answering a question at all means you get it wrong. If you keep all these tips in mind when preparing and passing the LEED AP BD-C exam, it is very likely that you will pass the test without any problems. It is important to note that LEED credentials are valid for two years. LEED APs in the specialty must purchase 30 hours of continuing education every 2 years to maintain their powers. In addition to continuing education, people must also pay a two-year USGBC renewal fee.
